

“HeritageLink: A Secure Web-Based Platform for Connecting Tourists with Tour Guides in Bangladesh”

Introduction :

Bangladesh possesses a rich & diverse collection of historical landmarks, archaeological sites & cultural heritage destinations that attract both domestic & international tourists seeking authentic cultural & historical experiences. Despite this growing interest, finding reliable, knowledgeable local guides who can bridge critical language gaps remains a major hurdle for international visitors. While local guides are widely available, existing platforms rarely verify their credentials, confirm real-time availability or showcase their multilingual capabilities. This forces non-Bengali speakers to navigate language barriers alone or rely on unverified third-party arrangements.

This project proposes a centralized, web-based platform that connects tourists with verified multilingual tour guides who serve concurrently as on-site translators & cultural interpreters. By integrating language translation directly into the guide's role, the platform eliminates the need for separate interpreter hires and streamlines the travel experience. The platform also includes an administrative management portal that enables authorized personnel to audit guide language credentials, manage heritage location information, oversee tour bookings & uphold the overall security & integrity of the system.

Project Objectives :

The primary objective is to develop a secure, reliable & user-friendly platform that streamlines guide discovery, multilingual communication & booking for heritage tourism in Bangladesh. The specific objectives of this project are :

- Develop a centralized, web-based platform for heritage tour booking
- Implement secure user authentication with role-based access control
- Enable tourists to conveniently browse & book guided tours online
- Maintain a verified registry of tour guides with certified dual-role (guide & translator) proficiencies
- Enable tourists to search, filter & book guides based on target languages and heritage site expertise
- Enable administrators to manage site listings, oversee guide data & process tour bookings

Project Scope :

This system covers the complete tour management process, from user registration & guide selection to booking & administration.

The Tourist Portal offers visitors a convenient & intuitive interface for exploring heritage destinations & booking qualified tour guides. The features include :

- User registration & secure login
- Update personal profile
- Browse heritage destinations
- Filter & view verified guide profiles by supported languages & site specializations
- Book dual-role tour guides who provide concurrent translation & interpretation during tours
- View booking status & tour history

The Administrator Portal equips authorized personnel with comprehensive tools to manage platform operations, maintain accurate records & ensure the authenticity of guide services.

The features include :

- Secure administrator login
- View registered users
- Approve & process bookings
- Manage tour guide accounts
- Manage heritage site information
- Manage guide availability calendars

Technology Stack :

Component	Technology
Frontend	HTML, CSS, JavaScript
Backend	PHP
Database	MySQL
Web Server	Apache
Database Management	phpMyAdmin
Version Control	Git & GitHub
Development Environment	Visual Studio Code
